

One of the first most observable trends based on the data is that the top ranking schools are charter schools. All of the charter schools have a passing percentage rate of 93% or higher between math and reading scores. The student body count also seems to be lower in comparison to the bottom performing schools.

The second most noticeable trend within the data is that the bottom performing schools all consist of district schools. The budget also seems to be consistent between the bottom performing schools based on students and that they have a higher budget compared to the top ranking schools.
